DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, 14, 34-~~47~~³⁷ drawn to a wound dressing and managing a wound, classified in class 602, subclass 57.
- II. Claim 13, drawn to a method of manufacturing a wound dressing, classified in class 427, subclass 389.9.
- III. Claims 18-33, drawn to a composite article, classified in class 428, subclass 304.4.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case invention I can be made by another process since invention I does not contain a thin polymer layer and Invention II involves the process of making a wound dressing containing a thin film of a polymer compound.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions invention I and III are different in that invention I

Art Unit: 1616

does not necessarily contain different layers whereas invention II is a composite article. Therefore, invention I is a generic wound dressing and invention III is a specific wound dressing.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case invention III can be made by a different process since invention III does not necessarily contain a thin polymer layer and invention II involves the process of making a wound dressing containing a thin polymer layer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
